Professional Profile

Junior Frontend Developer focused on React and Next.js, passionate about building modern, clean, and responsive interfaces. I have developed personal projects that are part of my portfolio, where I use technologies such as Tailwind CSS to create visually appealing designs adaptable to all types of devices.

I strive to write clean and reusable code, applying principles of componentization, responsive design, and best practices in project structure. I have also worked with dynamic content (such as blog posts), form integration, and visual effects using SVG and CSS animations to enhance user experience.

I am always looking to learn new technologies and improve my skills, with a special interest in developing functional, accessible, and well-designed web products. I have experience integrating reusable components, handling data from configuration files, and organizing my work as if in a professional environment.

Technical Skills

• Languages: JavaScript, Python, C#

• Frameworks & Libraries: React, Node.js, Django

• Databases: MongoDB, PostgreSQL

• Tools: Git, Docker, AWS

• Operating Systems: Windows, Linux

Education

Bachelor's Degree in Systems Engineering and Software Development

Universidad Superior Bajío, Ciudad Juárez, Chihuahua

Personal Projects

Full Stack API Development

Designed and developed several REST APIs using React with Hooks on the frontend and MongoDB as the database. Applied best practices in architecture and version control with Git.
Technologies used: React, MongoDB, Node.js, Express, Git, CSS
Repository: https://github.com/ricardo-2

Languages

• English: B1 (Lower Intermediate)
